

KRISHNA BHAGAVAN KARRI

krishnabhagavan910@gmail.com | +91-7569048553 | GitHub | LinkedIn | Portfolio

Career Objective

Software engineering student focused on, backend systems, and building reliable, high-performance applications.

Technical Skills

Frontend — HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Tailwind CSS, Redux Toolkit

Backend — Node.js, Express.js, FastAPI, REST APIs, Web Sockets.

Databases — PostgreSQL, MySQL, MongoDB, Redis

Generative AI — Python, LangChain, LangGraph, RAG Architectures

Systems & DevOps — Docker, Nginx, Linux, CI/CD basics

Projects

- **UniPilot — Multi-Tenant University ERP Platform** [\[Code Link\]](#) - **Unipilot**

Built a scalable multi-tenant ERP with 11 role-based dashboards and 90+ relational models across academics, HR, finance, and examinations. Implemented RBAC + JWT auth with refresh tokens, permission validation, and audit logging. Developed rule-driven OBE workflows, automated exam lifecycle (seating, approvals, results), and real-time updates via Socket.io. Containerized services using Docker Compose with Nginx reverse proxy and Redis caching to improve performance and deployment.

Tech Stack: React, Node.js, Express, PostgreSQL, Redis, Docker, Nginx, Socket.io, Redux Toolkit, JWT, AWS S3

- **Intelligent Query & Reasoning System (IQRS)** [\[Code Link\]](#)

Developed an AI-powered Python backend service using LangGraph, RAG, and LLMs to answer complex queries from multi-format documents (PDF, DOCX, PPTX, images via OCR). Implemented autonomous agent workflows for API and web interactions with adaptive reasoning, and built a scalable FastAPI backend with FAISS-based vector caching and pluggable LLM support (OpenAI, Gemini, NVIDIA, Hugging Face). Developed as part of a national level hackathon - Bajaj FinServ Hackrx 6.0

Tech Stack: Python, Langchain, Langgraph, Flask, FastApi.

- **Mobster Merch – An Ecommerce Site** [\[Code Link\]](#)

Built a production-ready, scalable e-commerce application from the ground up with React + TypeScript, Express.js, and MySQL, featuring a responsive storefront, secure JWT-based authentication, PhonePe payment integration, and a comprehensive admin dashboard for inventory, orders, and analytics. Implemented Redis caching, Cloudinary image storage, and Nginx-based deployment on Ubuntu for high performance and reliability.

Tech Stack: React 18, TypeScript, Tailwind CSS, Express.js, Node.js, MySQL, Redis, Cloudinary, PM2, Nginx

Education

- | | |
|--|--------------------|
| • B. TECH, AIML CGPA: 7.83 | 2022 – 2026 |
| Aditya Engineering College (AEC), Surampalem | |
| • Class XII (INTERMEDIATE), 91% | 2020 – 2022 |
| Vaishnavi Junior College, Tuni | |
| • Class X (SSC), 95.83% | 2019 – 2020 |
| Loyola E.M School, Tuni | |

Work Experience

- | | |
|--|------------------------------|
| • Co-Founder & Full Stack AI Engineer Ofzen [ofzen.in] | Feb.2026 – Present |
| As a Full Stack AI Engineer at Ofzen , I architected high-availability server infrastructures and scalable microservices for production-grade AI solutions. I developed and deployed full-stack features utilizing a data-driven approach to bridge the gap between complex AI models and user-centric interfaces. | |
| • In-House Internship – Aditya University [Code Link] | Mar. 2025 – Jun. 2025 |
| Developed a rule-based web application named “ Automated Reporting system ” to automate College Report Generation processes, streamlining administrative workflows and reducing manual effort. Collaborated with faculty to understand reporting requirements . | |
| Tech Stack: React.js, Express, Node.js, MySQL | |

Achievements

- Selected for Finals in Bajaj Hackrx 6.0 - A National level Indian Hackathon
